

Environmental & Sustainability Policy

Overleaf Publishers Ltd — Chainsaw Courses Platform

Document Ref	Version	Issue Date	Next Review
Environmental and Sustainability Policy	1.0	July 2026	July 2027

1 | Policy Statement

Overleaf Publishers Ltd recognises the environmental impact of its operations and is committed to minimising that impact through responsible business practices. As a vocational training provider for the arboricultural and forestry sector — a sector with a direct connection to woodland, biodiversity, and the natural environment — we have a particular responsibility to model and promote environmentally responsible practices.

2 | Commitments

2.1 Digital-First Delivery

The chainsawcourses.com eLearning platform is designed to minimise the need for physical travel, printed materials, and in-person attendance. By delivering training digitally, we significantly reduce the carbon footprint associated with traditional classroom-based vocational training. The platform's digital-first approach supports:

- Elimination of learner travel to training venues for the theory component of chainsaw qualification
- Reduction in printed assessment materials, certificates, and course handbooks
- Remote access to training from any location, reducing fuel consumption and associated emissions

2.2 Hosting & Digital Infrastructure

- The platform is hosted on Replit's cloud infrastructure, which operates with a commitment to energy-efficient data centres
- Video content is delivered via Vimeo Pro, which uses adaptive bitrate streaming to minimise unnecessary data transmission
- We actively consider the environmental credentials of our technology partners and will prioritise carbon-neutral or renewable-energy-powered services where alternatives are available at comparable cost

2.3 Printed Materials

- The Overleaf Chainsaw Manual is printed using FSC-certified paper stock where commercially available
- Print runs are sized to actual demand to minimise waste
- We encourage learners to use the digital platform as their primary learning resource and to consider digital access to reference materials where practical

2.4 Business Operations

- Remote and home-based working is our standard operating model, avoiding the energy consumption and commuting associated with dedicated office premises
- Business travel is minimised; where travel is necessary, lower-carbon options are preferred
- Printing is minimised across all business functions; digital document management is our standard
- Electronic waste is disposed of responsibly through approved WEEE recycling channels

3 | Arboricultural & Forestry Context

Our training content actively promotes environmentally responsible practices within the arboricultural and forestry sector, including:

- Biosecurity awareness — the Biosecurity & Hazard Map tool on the platform highlights key phytosanitary threats (ash dieback, oak processionary moth, etc.) to support learner awareness of their obligations under UK biosecurity regulations
- Responsible chainsaw use — training emphasises the duty to minimise damage to surrounding trees, ground flora, and soil structure during chainsaw operations
- Lone working and site safety — emergency planning and dynamic risk assessment tools promote responsible, low-impact site management

4 | Legal Compliance

- Environmental Protection Act 1990 — responsible waste management
- Waste Electrical and Electronic Equipment Regulations 2013 (WEEE) — responsible disposal of electronic equipment

- Climate Change Act 2008 — awareness of UK net-zero obligations and their relevance to our sector
- UK Forestry Standard and Phytosanitary Regulations — content alignment with statutory forestry obligations

5 | Monitoring & Review

Environmental performance will be considered as part of the annual business review. We will set and review measurable environmental targets on an annual basis and report progress in the annual policy review. This policy will be reviewed annually (next review: July 2027).
